

friendlyway secure browser 7[®]

The software for protection against vandals

With the friendlyway secure browser 7, public access of the computer, kiosk systems, terminals or touch screen displays are not only really easy to use, but the units will also be protected against false access, as well as against computer vandalism.

Amongst other things, the friendlyway secure browser 7 protects the operating system from manipulation. A system crash or the freezing of a terminal is therefore impossible. System failure often means damage to the image for the terminal, kiosk or display operator, administrative costs for the new installation of the system and for all loss in sales.

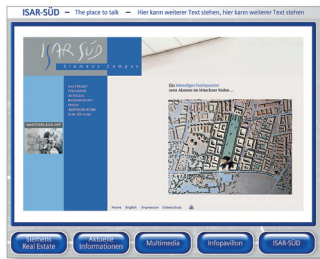

The configuration of the friendlyway secure browsers 7 is conceivably easy. You will be lead step by step through the installation possibilities. Programming knowledge is not necessary. On every page you will find a „Help“ button, over which you can get further information on each configuration possibility.
